

Faraz Shoukat

Full Stack AI Engineer

farazshoukat1@gmail.com | github.com/farazshoukat | farazshoukat.vercel.app | linkedin.com/in/faraz-shoukat-

EDUCATION

COMSATS University Islamabad — Abbottabad Campus

Sep 2022 – Aug 2026

Bachelor of Science in Computer Science

- Focused on Artificial Intelligence, Machine Learning, and Software Engineering. Final Year Project: FarmGuardian — an AI-powered digital farming assistant.
- Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Database Systems, Software Engineering, Operating Systems, Mobile App Development, Discrete Math

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, Dart, Java

Frontend: React.js, Next.js 14, Tailwind CSS, Redux, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets

AI & ML: TensorFlow, Scikit-learn, NLP, CNNs, LLMs, RAG, Pandas, NumPy, Matplotlib

Databases: PostgreSQL, MongoDB, Firebase Firestore, MySQL, Redis, Supabase

Mobile: Flutter (Cross-Platform), Firebase, Dart, Provider State Management

Automation: N8N Automation, AutoGPT, AI Agents, Data Engineering Pipelines

DevOps & Tools: Docker, Git/GitHub, GitHub Actions, Linux, Jupyter Notebook, VS Code

PROFESSIONAL EXPERIENCE

Lean Automation FZE

Jan 10, 2026 – Apr 3, 2026

AI/ML Engineer

- Developed, trained, and evaluated Machine Learning models for industrial automation and data-driven applications, using Python and modern ML frameworks.
- Built data pipelines for preprocessing and analyzing datasets to support model training and evaluation.
- Integrated trained models into production applications via APIs, optimizing performance for real-world deployment.
- Researched and implemented predictive analytics, anomaly detection, and generative AI solutions, collaborating cross-functionally to support AI-based projects.

Developers Hub Corporation

Aug 2025 – Oct 2025

AI Engineer Intern — Islamabad, Pakistan

- Delivered 5+ end-to-end AI/ML client projects spanning NLP, LLMs, and RAG-based question-answering systems within a fast-paced agile environment.
- Integrated machine learning models into production applications, implementing data pipelines from ingestion to deployment and achieving consistent client satisfaction scores.
- Developed cross-platform mobile applications with Flutter and Firebase, supporting real-time data sync for client-facing products.

KEY PROJECTS

FarmGuardian — AI Crop Disease Detection & Farm Assistant (Final Year Project)

React Native · TFLite (EfficientNet-B0) · Random Forest · Supabase · i18next

- Built an offline-first mobile app for Punjab farmers with on-device disease detection (EfficientNet-B0, 91% accuracy on tomato leaf disease) and Random Forest yield prediction across maize, wheat, rice, tomato, and potato, each paired with cure recommendations.
- Delivered crop planning with water/fertilizer guidance, a crop recommendation system, and daily mandi (market) price tracking, with full Urdu localization via i18next.
- Won 3rd Place and 1st Place (People's Choice) at the FYP Competition Spring 2026, COMSATS Abbottabad Campus; built with a 3-person team under faculty supervision.

Job Copilot — AI Resume Tailor

FastAPI · Next.js · TypeScript · Groq · Supabase

- Built a full-stack AI web application that ingests a user's resume PDF and job description, rewrites resume bullet points to match ATS keywords, and auto-generates a tailored cover letter — all within 60 seconds.
- Architected a FastAPI backend with Groq LLM inference and Supabase for user session management; deployed frontend on Vercel with responsive Next.js UI.

Multilingual AI Support Agent

FastAPI · React · Groq · Supabase · N8N · Python

- Developed an end-to-end AI customer support system capable of detecting query language, classifying intent, and routing tickets to the appropriate department using a Groq-powered LLM backbone.
- Integrated N8N automation workflows for real-time ticket escalation notifications and Supabase logging, reducing manual triage effort by an estimated 65%.

AI Portfolio & CV Generator

FastAPI · React · Groq · Supabase · WeasyPrint

- Engineered an AI-powered tool that converts a GitHub profile URL and LinkedIn PDF into a fully deployed live portfolio site plus a downloadable, ATS-optimized CV in under 60 seconds.
- Implemented WeasyPrint for server-side PDF rendering and Supabase for persistent user data; automated deployment pipeline to Vercel on every generation.

Maternal-Fetal Risk System — AI Clinical Risk Assessment Platform

React · FastAPI · Scikit-learn · XGBoost · Pandas

- Built a two-tier AI-driven clinical dashboard and API that assesses maternal health risk and fetal distress from clinical vitals and Cardiotocogram (CTG) data, comparing Random Forest and XGBoost models optimized for high-risk recall.
- Developed a React/Vite frontend with role-based access, longitudinal vitals visualization, and a real-time fetal assessment tool, backed by a FastAPI service with graceful fallback to clinical heuristics when the ML backend is offline.
- Added model interpretability (feature importance, permutation analysis) and fairness audits (demographic parity, equal opportunity) to the ML pipeline; built with a 2-person team.

CERTIFICATIONS & COURSES

- Foundation: Introduction to LangChain — Python (Apr 2026)
- Generative AI Architectures with LLM, Prompt, RAG & VectorDB — Udemy (2025)
- Automate Everything: N8N Automation — Udemy (2025)
- Machine Learning A to Z: Hands-On Python & R — Udemy (2025)
- N8N AI Agents by AdaptifyAI — Udemy (2024)
